## PREFACE

The International Centre for Diarrhoeal Disease Research, Bangladesh (ICDDR,B) is an autonomous, international, philanthropic and non-profit centre for research, education and training as well as clinical service. The Centre is derived from the Cholera Research Laboratory (CRL). The activities of the institution are to undertake and promote study, research and dissemination of knowledge in diarrhoeal diseases and directly related subjects of nutrition and fertility with a view to develop improved methods of health care and for the prevention and control of diarrhoeal diseases and improvement of public health programmes with special relevance to developing countries. ICDDR,B issues two types of papers: scientific reports and working papers which demonstrate the type of research activity currently in progress at ICDDR,B. Under its Special Publication Series, ICDDR,B has endeavoured to publish this *Supplement to Index to CRL Publications and Scientific Presentations, 1960-1976*. The supplement includes 259 published and unpublished reports, periodical articles, abstracts, letters, and scientific presentations at seminars, congresses, conferences, meetings and workshops covering the period from 1977 to 1978. It also includes another 144 published and unpublished papers which were not included in the 1960-1976 index. Scientific presentations made during 1975-1977 before the CRL Technical Committee meetings are also listed in this supplement. Most of the published materials are available in the ICDDR,B Library.
